

LiveView™

Live Feed API for connecting virtually any other application to real-time Nlyte data

DATA SHEET

LiveView™ allows third party applications to access real-time temperature, power and other monitored data as soon as it's polled.

Temperature and power data need to be available in real-time to other vital data center applications. LiveView makes this data accessible and available via a standard web interface for a user's self-developed portal or any other application, for example: dynamic/adaptive cooling, real-time CFD simulation, power capping/load shedding or control applications.

LiveView is a Web Service-based interface which retrieves an array of the latest polled values with timestamps, and provides room, location and device data. This gives the user access to every individual monitored data point.

Additional function calls are provided to make it easy to use LiveView. The GetLocations call returns an array of all rooms, grouped by location; GetDeviceList returns a list of devices in the specified room which contains function information; and GetPointValues returns the last known good value and poll timestamp for the requested values.

About Nlyte

Founded in 2004, Nlyte Software is recognized as the industry leading data center infrastructure management (DCIM) solution provider. Nlyte's DCIM provides unmatched functionality that supports all data center processes across the entire "dock to decom" lifecycle. With a 98% customer retention rate, Nlyte's DCIM solution is used by many of the world's largest and most sophisticated data centers, as well as many small and medium sized organizations. Customers can quickly deploy the Nlyte DCIM solution and begin to immediately enjoy reduced costs and increased efficiency across all data center processes.
